

WRITVERO ACQUISITION FACT SHEET

Process Serving Operations Platform | Software / source-code asset acquisition | Updated September 27, 2026

What WRITVERO does

A web-based process-serving operations platform organized around one assignment lifecycle: intake, assignment files, route planning and mileage, client-safe status, camera/GPS evidence, SHA-256 integrity verification, affidavit preparation, job/revenue tracking, skip-trace training/casework, and approval-based marketing follow-up.

Acquisition highlights

- **Buyer-ready release:** commercial source code plus deployable release materials and buyer installation, acceptance, operations, and release documentation.
- **Portable architecture:** PHP/HTML/CSS/JavaScript with JSON/file storage; current build requires no SQL database and separates private operational data from the public web root.
- **Validated fictional-data workflow:** buyer demo tested through Assignment Files, Status, Field Operations, billable-mileage handling, affidavit save/archive, and Job & Revenue Tracker closeout.
- **Buyer-controlled environment:** hosting, authentication, integrations, backups, and third-party credentials are supplied and controlled by the buyer.
- **Included digital assets:** writvero.com and writvero.software, WRITVERO branding/design assets, and associated rights to the extent owned.

Core modules

Operations	Business / client
Field Operations + route mileage	Service Request intake
Camera/GPS + Evidence Archive	Client Assignment Status
Assignment Files + SHA-256 manifest	Job & Revenue Tracker
Status Update + Affidavit Generator	Marketing + Skip Trace
PWA / offline shell	Buyer-configured integrations

Release validation

Commercial release validation: PHP syntax PASS; JSON/webmanifest parse PASS; major HTTP module smoke tests PASS; SHA256SUMS.txt fingerprints release files. **Buyer-demo validation:** fictional end-to-end workflow re-tested September 27, 2026, including one-way per-assignment billable mileage, successful-service affidavit population, finished-affidavit save/archive, and completed-job status.

Transaction boundary

Contemplated asset sale of WRITVERO source code, deployment/release materials, documentation, brand/design assets, writvero.com, and writvero.software. McSquare Software LLC, mcsquare.software, seller operating-business clients, revenue, assignments, records, contracts, goodwill, and seller bank/payment/email/hosting/cloud/integration accounts are excluded unless a definitive signed agreement expressly states otherwise.

This is a software/IP asset opportunity, not a representation of transferred subscribers or recurring software revenue. Buyer should conduct technical, legal, tax, intellectual-property, and commercial diligence before closing.

Private fictional-data demonstration and deeper diligence materials available to qualified buyers.
